

City Siege Handbook.

Every building, what it does, its health at every level, and the exact rule behind every number.
Generated from the game's own rules file (`src/data/progression.js`) on 2026-09-30. If the game and this page ever disagree, the code changed after this was generated. Rerun `node tools/handbook/gen-handbook.mjs`.

The five rules

Everything else in this handbook follows from these.

Town Hall level is your city tier

No other building can go above the Town Hall's level. The Town Hall itself goes to 12.

Every Town Hall level unlocks something

At least one new building, plus higher build limits, more land, a bigger police force and a bigger raid bounty. Some levels also add labour.

Every building type has a limit

How many you may own depends on your Town Hall. The shop counts what's placed *and* what's in your inventory, so you can't stockpile past it.

Building takes real time

Jobs double in length every level, up to 8h, and keep running with the game closed. So do your producers. Gems finish a job early.

Each job needs a free labourer

Labour Huts provide labourers, but the Town Hall caps how many can work: 2 · 3 · 3 · 4 · 4 · 5 · 5 · 5 · 6 · 6 · 6 · 7 from Town Hall 1 to 12.

The formulas

These are the actual algorithms. "Base" is the building's level-1 value, shown on every card below. L is the level.

Health

$$\text{HP} = \text{base} \times (1 + 55\% \times (L - 1))$$

A straight line. Barriers (Roadblock, Spike Trap) grow 15% per level instead, because they start very tough.

Laser Obelisk: 1,350 at L1 → 2,093 at L2 → 9,518 at L12.

Upgrade cost

$$\text{cost of level } L = \text{shop price} \times 1.7^{(L - 1)}$$

Each level costs 1.7× the one before, for cash, iron and wood alike.

Town Hall: 500 cash → 850 at L2 → 171,359 at L12.

Build time

$$\text{seconds} = \text{buildBase} \times 2^{(L - 1)}, \text{ capped at 8h}$$

Doubles every level. Most buildings hit the cap around level 10–11.

Town Hall: 25s, 50s, 1m 40s ... 8h at L12.

Finishing early

$$<1 \text{ min: } 1 \text{ gem} \cdot 1 \text{ hour: } 20 \cdot 8 \text{ hours: } 93 \cdot 24 \text{ hours: } 100$$

Gems scale with the time left, so gemming a short job is cheap and a long one is not.

You start with 15 gems. The only way to earn more is winning raids (2 at Town Hall 1, 25 at Town Hall 12).

Production

$$\text{rate} \times (1 + 35\% \times (L - 1)) \cdot \text{storage} \times (1 + 80\%$$

Producers fill while the game is open *and* closed, and stop when full. Storage holds hours of output, so check in a few times a day.

The Crypto Vault is the exception: it can't be tapped and only pays out when a raid breaks it.

Turrets

$$\text{range} +12\%/L \cdot \text{damage} +3\%/L \cdot \text{interval} -0\%/L \text{ (firing rate)}$$

Levels mostly buy a gun HP and reach; damage grows slowly, and some turrets grow it faster (see each card). Every round lands, so each gun you add adds its damage. A parked raider tuned to your Town Hall survives your whole kill box for 6–20s.

Auras multiply on top: Solar (rate), Fusion (damage), Orbital Relay (range + damage). The same aura twice doesn't stack.

Build limits

$$\text{allowed} = \text{BUILD_LIMITS}[\text{building}][\text{Town Hall}]$$

A hand-set table, not a formula: 36 buildings × 12 Town Halls. Shown on every card and in full under Master tables.

Roadblocks: 6 at TH1, 40 at TH12.

Labour

$$\text{labourers} = \min(\text{Labour Huts built}, \text{Town Hall cap})$$

A hut past the cap does nothing until you upgrade the Town Hall.

Cap by Town Hall: 2 · 3 · 3 · 4 · 4 · 5 · 5 · 5 · 6 · 6 · 6 · 7.

Roads

$$\text{off the asphalt: } -25\% \text{ top speed, } -20\% \text{ acceleration}$$

Roads are the fast lanes - for the raider and for your police alike. Leave them out and everyone slows down.

The road budget grows every Town Hall, so shaping the route is a real defensive lever.

Taking damage

$$\text{guns always land} \cdot \text{contact buffer } 0.35\text{s} \cdot \text{hop evades}$$

Turret fire, beams, splash and traps always deal their damage, so more guns really is more pressure. Only a police or SWAT contact leaves a brief buffer. The free hop stops you getting stuck but cannot keep you airborne (at most 35% of a raid).

Landmines inside 1.5s of each other do not all fire, and a building razed by another building's explosion pays only 25% of its loot.

Your gun

autocannon 14 per shell (24 vs police)

The autocannon is what actually razes a city, and the Weapons Lab is the only thing that grows it - by level 12 it hits for 106, keeping pace with building health.

Cards are burst damage; the cannon is the clock.

Land

build radius: 11.5 tiles at TH1 → 14.8 at TH12

One tile is 5.5m. The city wall sits at 15 tiles, so each Town Hall opens a new ring of land inside it.

Anything already beyond your radius stays; you just can't place new things there yet.

Town Hall ladder

What each Town Hall level gives you. "More of" counts how many building types get a higher limit. The last column is the cost and time to reach that level.

Every building

Grouped by the Town Hall that unlocks them. Each card shows what the building promises, the mechanics behind it (level 1 → level 12), its health at all 12 levels, and how many you may own at each Town Hall (— means still locked).

TH 1 Frontier Settlement · 11 new

Town Hall

Heart of the city. Its level IS your city tier.

CORE

TH 1

WHAT IT DOES FOR YOU

Every upgrade raises the level ceiling for every other building, unlocks at least one new blueprint, widens the buildable radius and raises several build limits. Town Halls 2, 4, 6, 9 and 12 also raise the labour cap by one (build another Labour Hut to staff it).

Fortified Main Gate

Heavy perimeter gate with a mounted turret. Every raid starts at the gate the raider picks.

GATE

TH 1

WHAT IT DOES FOR YOU

Your city has three fixed gates on the perimeter wall. Each is a raid entry point with a mounted turret that shoots back at a raider coming through it. Gates are not bought or upgraded.

Police Station

Houses pursuit cruisers that deploy the moment sirens sound.

SPAWNER

TH 1

WHAT IT DOES FOR YOU

Each station puts one cruiser on the map, and its level makes that cruiser tougher and faster. Cruiser contact busts the raider outright.

- Sends 1 × cruiser per raid: 320 → 980 HP, 16.5–19.0 → 20.9–23.4 m/s; touching the buggy is an instant **bust**. Wrecked units come back while any spawner stands, up to the Town Hall's police cap.

Petrol Pump

High output, highly explosive. Detonates in a chain reaction when destroyed.

PRODUCER

TH 1

WHAT IT DOES FOR YOU

Your best early cash earner, and a trap: its blast badly hurts a raider caught next to it, and sets off every other pump, refinery, reactor or collider inside it, whatever their level.

- Makes **cash**: 4.0/s → 19.4/s, holds 54,000 → 529,200 (about 3.8 hours of output). Keeps producing while the game is closed. Tap it to collect.
- Explodes when destroyed: **420 → 974** damage in **18m → 23.9m**, falling to 30% at the edge. Hits the buggy, pursuit units and your own buildings, and can set off other explosives.

Spring Launch Trap

Coiled pressure plate that catapults a vehicle into the air.

TRAP

TH 2

WHAT IT DOES FOR YOU

Pops the raider straight up, bleeds off most of their speed and takes the wheel away for nearly two seconds (longer per level). In the air they are safe from guns, traps and cruisers (drones still strafe them), but they come down slow and out of control and coast to a near stop - so cover the landing spot with guns and cruisers.

- Launches the buggy into the air when the buggy drives within **4.5m → 6.0m**, no control for **1.8s → 3.4s**. Re-arms 5.8s after firing. Drive-over: never blocks the road, rounds fly over it, and it never counts toward 100%.
- Pays no loot when destroyed.

Big Storage Depot

Warehouse holding structures you lift off the map.

STORAGE

TH 3

WHAT IT DOES FOR YOU

Lets you redesign freely without demolishing: each depot level holds 6 stowed buildings (depots add up), and a stowed building comes back at the level it left at. A layout preset may park more here than it holds; you just cannot stow more by hand until you place some back.

- Holds **6 stowed buildings per depot level** (depots add up). Stowed buildings keep their level.

SWAT Armory

Deploys armored SWAT interceptors in addition to your patrol cruisers.

SPAWNER

TH 3

WHAT IT DOES FOR YOU

SWAT units are far tougher than a cruiser and faster than a stock buggy. Every armory level up to 11 makes them faster, so on a road the slowest of them keeps pace with a buggy tuned to your Town Hall, and off the asphalt, where a buggy loses a quarter of its speed, they out-run it - a raider cannot simply drive away from them without nitro or a jump. Level 12 adds toughness only: its SWAT already keep pace with the best-tuned buggy.

- Sends **1 × swat** per raid: **600 → 1,920 HP**, 33.0–36.0 → 48.0–51.0 m/s; touching the buggy is an instant **bust**. Wrecked units come back while any spawner stands, up to the Town Hall's police cap.

Buried Landmine

Buried charge, invisible until it detonates. One use per raid.

TRAP

TH 3

WHAT IT DOES FOR YOU

The single biggest burst of damage per resource in the game, but it only fires once. It goes off at full strength even on a raider fresh through the gate, and pays them no loot. Only one mine can go off under a raider every 1.5 seconds - the rest of a cluster stays buried and armed until then - so spread mines out along the route rather than packing them together. A spent mine leaves a crater, not rubble. Bury them where raiders must drive, not where they choose to.

- Explodes when the buggy drives within **8.0m → 10.6m**, **600 → 1,392** damage. **Fires once per raid**. Hidden from the raider until it goes off. Drive-over: never blocks the road, rounds fly over it, and it never counts toward 100%.
- Pays no loot when destroyed.

TH 5 Modern Municipality · 3 new

Missile Silo

Silo launching guided missiles that track their target.

TURRET

TH 5

WHAT IT DOES FOR YOU

Its missiles fly at 68 m/s, faster than any buggy off nitro, and steer to meet the raider, so dodging does not save them - only a nitro burn (never up more than half the raid), a jump, a cloak (missiles stop steering the moment it goes up, though one already on your line still lands) or getting out of range does. 55m of reach at level 1 covers most of your economy from one tile.

- Shoots the buggy: range **55m → 127.6m**, damage **70 → 93**, a shot every **3.20s → 3.20s** (L1 → L12).
- Homing rounds steer toward the buggy mid-flight.

Tech Lab

Cyber-warfare lab that pushes ability cards past their limits.

RESEARCH

TH 5

WHAT IT DOES FOR YOU

Unlocks ability-card levels 4 and 5 (Tech Lab 1 and 2), and every Tech Lab level recharges all your cards 3% faster (36% at level 12; a cloak can still never be up more than 80% of the time, a nitro burn more than 50%, nor a Big Jump keep the buggy in the air more than 70%). The Vehicle Lab only takes cards to level 3, so this is where your raid kit keeps growing. One lab per city - only one is ever read.

- Tech Lab 1 opens card level 4, Tech Lab 2 opens level 5, and every Tech Lab level cuts card cooldowns by **3%**.
- Only the best one counts.

Fusion Reactor

Containment torus feeding the whole defensive grid.

AURA

TH 7

WHAT IT DOES FOR YOU

Smelts iron at 9/s (3.6x an Iron Foundry, the most of any building) AND adds +2% DAMAGE per level to every turret and gate gun within 45m (+24% at level 12) - your first damage aura, three Town Halls before the Orbital Relay. Reactors do not stack: a gun takes the best one covering it, and reactor plus relay damage never adds more than +25%, so under a high-level relay a reactor adds little damage. It also detonates catastrophically, so never ring it with your own economy.

- Makes **iron**: 9.0/s → 43.6/s, holds 64,800 → 635,040 (about 2.0 hours of output). Keeps producing while the game is closed. Tap it to collect.
- Explodes when destroyed: **1,400 → 3,248** damage in **32m → 42.6m**, falling to 30% at the edge. Hits the buggy, pursuit units and your own buildings, and can set off other explosives.
- Turrets within 45m hit harder: **+2% → +24%** (all damage buffs together cap at +25%). Several of these do not stack; the strongest one counts.
- Tall enough to block sightlines across the city.

Antimatter Collider

Particle ring that manufactures cash, iron AND wood at once.

PRODUCER

TH 11

WHAT IT DOES FOR YOU

The only building that produces all three resources. Its containment failure is the largest explosion in the game - place it far from anything you care about.

- Makes **cash, iron and wood**: 8.0/s → 38.8/s, holds 57,600 → 564,480 (about 2.0 hours of output). Keeps producing while the game is closed. Tap it to collect.
- Explodes when destroyed: **2,200 → 5,104** damage in **40m → 53.2m**, falling to 30% at the edge. Hits the buggy, pursuit units and your own buildings, and can set off other explosives.
- Tall enough to block sightlines across the city.

AURA

TH 12

WHAT IT DOES FOR YOU

Every building within 40m takes 4% less damage per citadel level (48% at level 12) - until the citadel itself falls. Explosives are the exception: one caught in another explosive's blast still goes off. The citadel does not shield itself. The endgame capstone: a raider who leaves it standing fights your whole core at up to 48% less damage.

- Buildings within 40m take **4% → 48%** less damage (capped at 50%). It does not shield itself. Several of these do not stack; the strongest one counts.
- Tall enough to block sightlines across the city.

How a raid works

There are two kinds of raid. A **practice raid** (ATTACK CITY) is on your own city. A **battle raid** (BATTLES, online builds) is on a rival's locked city. Both play out the same way: the target's defenses fight back, and whatever you destroy pays out as loot.

- 1 Recon.** The camera frames the target's three gates. Tap one to choose where to break in.
- 2 Breach.** The buggy rams the gate. Sirens start. Every turret, trap, spawner and aura arms at this moment, at its current level.
- 3 Combat.** The buggy (500 HP + 200 shield, 67 mph stock) auto-fires its cannon. Gates shoot back (35m range, 22 damage every 1.4s). A police cruiser or SWAT unit touching you is an instant bust. Drones strafe you even mid-air. Traps fire when you drive over them (your rounds fly over them). Inside an EMP field your ability cards are jammed.
- 4 Hopping.** Space is a free small hop with a 2.5s cooldown, so you can always get over a barrier but can't stay airborne. After a ram or a blast, further rams and blasts do nothing for 0.35s; gunfire always lands.
- 5 Lives.** 3 lives per raid, plus up to 2 spares bought in the garage. Losing all armor or getting busted costs a life, and the police redeploy.
- 6 Result.** Destroying 100% wins. Gates, trees and traps don't count toward the 100%. You can retreat at any time and keep what you've looted.

Loot per destroyed building: cash = $120 \times \text{level}$ ($250 \times \text{level}$ if it explodes), iron = $80 \times \text{level}$, wood = $90 \times \text{level}$. Trees and landmines pay nothing. A Crypto Vault adds everything it has mined.

Gem bounty on a win pays in full only for a real fight: the city must have enough buildings *and* every kind of defense its Town Hall allows, each with 60% of its build limit standing at the Town Hall's level. Every gun, pursuit base (police, SWAT, drones), trap and aura building (Solar Array, Fusion Reactor, EMP Disrupter, Orbital Relay, Quantum Citadel) is its own kind (TH1: 11 targets and 1 kind of defense; TH12: 89 targets and 18 kinds). 45% of the defense half is paid on how well covered your kinds are on average and the other 55% on your **WEAKEST** kind alone, so leaving one kind out of the city costs far more than its share - gems only pay on a win, and a raid that has one kind of defense less to beat wins a lot more often. Short of either, the bounty is scaled down: a Town Hall 12 city with one kind of defense stowed pays 10 of 25 gems, with its EMPs, Relays and Citadel stowed 9, and with its traps stowed too 6. Stowing everything and raiding an empty city pays nothing.

Battle raids run on the opponent's city as it was *locked* at the battle's start time, loaded into a separate arena, so your own city and its save are never touched. Choosing a gate uses your one attempt; ABORT RECON before that is free. A 10-minute clock runs from the breach, and at 0:00 the raid ends as TIME'S UP with whatever you razed. Your buggy, cannon and deck come from *your* labs and garage; defenses, police, loot and the gem bounty come from *their* city. The raid pays the usual loot and gems, and nobody's bank is debited. More stars wins the battle, then higher destruction %, then the faster raid; the winner gets +30 trophies and the loser -20 (never below 0), a draw gives both +5, and a battle nobody raided is void (no trophies). Full rules:

`docs/BATTLES.md` .

Buggy & garage

Offense lives in the Vehicle Garage. Five tuning tracks go to level 12, and **Vehicle Lab level L opens tuning level L+1**, so the garage keeps growing with the city. Deck slots by Vehicle Lab 0 / 1 / 2 / 3: 3 / 3 / 4 / 5. Card gates: L2: Vehicle Lab 1 · L3: Vehicle Lab 2 · L4: Vehicle Lab 2 + Tech Lab 1 · L5: Vehicle Lab 2 + Tech Lab 2.

Tuning tracks (each level costs 1.6× the one before)

Saving & timers

Three things are saved in the browser, separately. In an online build, signing in also keeps them in your account, so the same city follows you to another device.

SAVE KEY	HOLDS	WHEN IT SAVES
city_siege_city	Every building's type, tile, level and rotation; every road tile; stored output; every running build job as an end time , not a countdown.	Within a second of any change, and when the tab is hidden or closed.
city_siege_eco	Cash, iron, wood, gems, the Construction Inventory, the level of each stowed building, spare lives.	On every spend, collect or purchase.
city_siege_garage	Tuning levels, card unlocks and levels, the raid deck.	On every garage purchase.
city_siege_cloud	Online builds only: which account this browser's save belongs to, the last cloud version it synced, and the AI designer's bank credits already paid.	On sign-in and after every sync.
city_siege_cloud_base	Online builds only: a copy of the cloud city this browser last synced, so changes made here (offline, or in the second before a sync) can be merged onto a newer cloud version instead of lost.	After every sync.

In your account (online builds, signed in)

CLOUD DOCUMENT	HOLDS	WHEN IT SAVES
cities/<you>	The same city as <code>city_siege_city</code> (every building keeps a stable id), plus the Construction Inventory and stowed buildings. Every save is a new numbered version. Rivals can read it; only your game and your AI designer write it.	1.5 seconds after a change (never more than 3 seconds while you keep editing), at once after a purchase, upgrade, collect or gem finish, and at once when the tab is hidden.
saves/<you>	Cash, iron, wood, gems, spare lives and the garage. Private. Two devices' spends and incomes are merged, never overwritten.	3 seconds after a spend, collect or garage purchase.
players/<you>	Commander name, Town Hall, trophies and wins / losses / draws. Public.	When a battle settles; last-seen every minute while you play.

Jobs are saved as end times, so they keep counting down while the game is closed. On the next launch, finished jobs show as "finished while you were away" and producers catch up on what they made. A save that won't load is kept as `<key>.bak` instead of being overwritten. Jobs never complete mid-raid; they wait until you're back in the city.

Online: the game still starts from the browser save, then syncs. If the cloud has a newer version (from another device or your AI designer), it is applied as soon as you are not raiding or dragging a building: its layout wins, and whatever you did here that it has not seen - purchases, upgrades, collects, roads and moves that still fit - is merged onto it. Signing in on a browser you played on as a guest keeps that guest city on the device (ACCOUNT offers to restore it). A second account signing in on the same browser starts fresh; the first account's saves are kept as `<key>.bak.<account>` and in its cloud copy. Details: `docs/ONLINE.md` .

Master tables

Knobs you can change

If an algorithm feels wrong, it's one of these, all in `src/data/progression.js`. Tell me the knob and the new value, or the behaviour you want instead, and it changes in one place.

Knob	Now	What it controls
HP_PER_LEVEL	0.55	Share of base HP each level adds (barriers use <code>BARRIER_HP_PER_LEVEL = 0.15</code>).
COST_PER_LEVEL	1.7	Upgrade cost multiplier per level. Level 12 costs 343× the shop price.
buildBase (each building)	5–60 s	Level-1 build time; doubles every level.
MAX_BUILD_SECONDS	28800 (8h)	Longest a single job can take.
PRODUCE_PER_LEVEL / CAPACITY_PER_LEVEL	0.35 / 0.8	Producer rate and storage growth per level.
TURRET_RANGE / DAMAGE / RATE_PER_LEVEL	0.12 / 0.03 / 0	Turret growth per level (a turret may override its damage growth).
TURRET_RATE_FLOOR	0.55	Fire interval never drops below this share of base.
AURA_DAMAGE_CAP / SHIELD_AURA_CAP	0.25 / 0.5	Ceilings on aura damage buffs and the Citadel shield.
TRAP_DAMAGE / RADIUS / DURATION_PER_LEVEL	0.12 / 0.03 / 0.08	Trap growth per level.
BLAST_DAMAGE / RADIUS_PER_LEVEL	0.12 / 0.03	Explosive building growth per level.
BUILD_LIMITS	36 × 12 table	How many of each building each Town Hall allows.
TOWN_HALLS	12 rows	Labour cap, build radius, police cap, gem bounty and the size/defense a raid needs to pay it.
PURSUIT_UNITS	cruiser / swat / drone	HP, speed and contact rule of every pursuit unit.
GARAGE_TRACKS / TRACK_COST_GROWTH	per-track steps / 1.6	How much each tuning level adds and how fast its price grows.
RAIDER_BASE	500 HP, 200 shield, 67 mph	The stock buggy, hop cooldown, contact-immunity window (rams and blasts only), cannon damage.
LOOT_PER_LEVEL	120/80/90	Loot per destroyed building per level (explosives pay 250 cash).
gemsToFinish()	1 → 20 → 260	Instant-finish price: under a minute, one hour, one day.

Known gaps

Things deliberately not done yet, for you to decide on.

- **Main Gates are fixed at 3.** They sit on the wall and can't be bought, placed or upgraded. Making them placeable needs a rule for where a raid can start.
- **The original 16 buildings only have 3 looks.** Their stats grow to level 12, but their model stops changing after level 3. The 18 new buildings change look through level 6.
- **Touch driving controls don't work.** The mobile buttons point at page elements that don't exist, so raids need a keyboard. Unrelated to progression and untouched.

City Siege Handbook · generated from source · every number is the code's, not an estimate.
